

VELO ENERGETICUS

A sturdy hometrainer with an efficient generator can be combined with a series of special applications:

VELO ENERGETICUS PYRO MAGISTRALIS is connected with a classical physics experiment. An electric arc will rise upwards between two diverging rods, if enough power is put to the pedals.

VELO ENERGETICUS DOMESTICUS VULGARIS connects to a piece of furniture holding an electric outlet and several household appliances. The person operating the contraption can experiment and feel the difference between a LED lamp, a mixer or an electric kettle.

VELO ENERGETICUS FRITUS powers a vending machine with 8 windows that works as an energy meter. In the beginning the lowest window is lit, which contains a dry slice of bread. Persistent bikers will eventually arrive at the top window where they find a hot dog, the mother of all snacks, but also the snack which has the biggest footprint.

VELO ENERGETICUS FOSSILIS lets people produce the energy-content of a droplet of crude oil, after which a pump releases a drop of crude from an infusion bag and into an oil barrel.
